For almost four decades, Mr. Jimmie Holman has been involved in proprietary research and development in many areas of technical design, including electronic warfare, electronic surveillance, signal intelligence, exotic signal processing, advanced supercomputer development, and specialized studies for both domestic and foreign governments and agencies. Since around 1995, he has been extensively researching resonant frequency technology, focusing on its positive biological effects for personal, environmental, medical, commercial and industrial applications. Based in Dallas, Texas, Mr. Holman oversees much of the proprietary work of Pulsed Technologies in Eastern Europe.
